Flowchart of desired outcome

Index page

Our fleet

Shows all the cars in the company

Search car

create filter to search for desired car

Search car → **YES** → relevant cars show up

NO

back to filter

book car

Login/register → **YES** → confirmation message page

+

Appear on Admin's booking management page

NO

Logged in

Shortfalls (to do):
1. When trying to book car without logging in, user is brought to login/register page to complete the booking. But after logging from here, search results got erased and user has to start search filter again.
2. Confirmation page after book car button
3. CRUD operations on booking management page
4. Bookings on booking management page
